Particularly for children with ASD, interventions involving parents have generated positive outcomes. For example, anxiety can make it extremely difficult for children with ASD to do everything from making friends, to going shopping, to taking public transportation. The classes have a ratio of at least one adult for every student.

Because these infants do not come home immediately after birth, a concern is Internalizing behavior and mental illness are manifest in young children primarily as anxiety and depression.

Determining eligibility, gathering information, and identifying intervention goals for children with ASD are addressed in the assessment chapter followed by prominent approaches applied in music therapy practice. Each session focused on working through a problem identified by the mother using the steps of PST goal setting, brainstorming, evaluating

solutions, choosing a solution, and action planning.  
ViewAbstract. Some shelters now offer structured parenting programs, although there is very little evidence on the nature or effectiveness of .
